

# Agile Business Analysis

Collaborate with Agile team members to build the right products, for the right customers, at the right time, while reducing waste.

## Overview

This highly interactive workshop-style short course will help you perform business analysis activities in an Agile environment so that you are better equipped to deliver value to your organization.

## Learning Outcomes

### Implementation of workshop learning will enable teams to:

- Describe the overall agile values, principles, and mindset
- Describe the role of the Business Analyst in Agile software teams, including collaboration with Product Owner role
- Facilitate initial product discovery sessions to seed the product backlog
- Discover, prioritize, and elaborate features, epics and stories to groom product backlog
- Use DRIPS technique to factor epics into granular stories
- Facilitate grooming (elicitation) sessions to elaborate user stories
- Employ lightweight analysis modelling techniques
- Differentiate between functional user stories, technical user stories and spikes
- Use a simple and powerful format to write effective functional user stories and acceptance criteria
- Collaborate and communicate with developers and testers to deliver high quality product releases
- Design and deploy an effective Agile business analysis process
- Help plan product releases
- Employ 5 principles of Agile Business Analysis to create and deliver value

## Course Benefits

- Better project outcomes
  - Business VALUE delivered more frequently
  - Increased VELOCITY
  - Improved product QUALITY
  - Reduced TIME to market
- Improved customer (business, customer, consumer) satisfaction
- Better team productivity, collaboration and empowerment
